

NEW PUBLICATION FROM THE SOMERSET NATURAL HISTORY &
ARCHAEOLOGICAL SOCIETY

SOMERSET AND THE DEFENCE OF THE BRISTOL CHANNEL IN THE SECOND
WORLD WAR by David Dawson, David Hunt and Chris Webster

With the outbreak of the Second World War, it became increasingly obvious that Somerset was in a key location to ensure the forward and coastal defence of the Bristol Channel and its associated ports and industries. This book gives a unique overview of the naval and maritime activities on the waterway and explains their significance to the national war effort.

Somerset's contribution to the Bristol Channel defences are explained in depth bringing the interpretation of archaeological evidence together with other documentation and the wealth of records in the National Archives. Not only are the anti-invasion defences, like the pillboxes and barbed wire on the beaches or coast artillery are discussed but also the activities like the denial measures and saboteurs and spy systems that were set up in case the Germans managed to occupy coastal areas.

The threat from the air is covered in some detail and includes RAF Fighter Command activities, radars, searchlights, anti-aircraft guns and rockets together with the secret electronic warfare activities including radio counter measures against Luftwaffe bombers, bombing decoys and camouflage. The numerous other wartime military activities along the coastline are also discussed.

In this volume, the three authors, all members of the Society, have for the first time brought together not only the archaeological interpretations of the surviving infrastructure but have blended it with the documentary evidence of the perceived threats, the organisations, plans and procedures that were implemented, many of which were secret, and added both technical and military expertise to explain in simple terms with pictures, maps, diagrams and glossary just how much Somerset contributed to defending the Bristol Channel in the Second World War.

112 pages, 64 maps, diagrams and illustrations, many in colour. Fully indexed with a comprehensive glossary of terms. A4 format.
